GentleCath™ Insertion Kit

Helping you to catheterize... your way

The GentleCath™ Insertion Kit includes a range of supplies, designed to help you catheterize in the way that works best for you:

- 1** Underpad: Placing this underneath yourself when catheterizing can protect you, your immediate environment and your clothes from residual liquid
- 2** Exam Gloves (pair): Wearing these can support clean catheterization technique and may help to reduce the risk of infection
- 3** Collection Bag: Connecting this to the catheter can allow you to measure the amount of fluid drained, or simply catheterize when a bathroom or toilet is not available
- 4** Antiseptic (BZK) Pad: Using this can help you to clean your urethral entrance and prepare yourself for catheterizing
- 5** Lubricating Jelly: Squeezing this additional lubricant onto the catheter can aid insertion, if required
